SECRETARY

Patrick Walsh, P.E.

Meeting Policies and Regulations

Order of Agenda

Planning Commission may alter the order of the agenda to consider variances first, followed by replats requiring a public hearing second and consent agenda last. Any contested consent item will be moved to the end of the agenda.

Public Participation

The public is encouraged to take an active interest in matters that come before the Planning Commission. Anyone wishing to speak before the Commission may do so. The Commission has adopted the following procedural rules on public participation:

- Anyone wishing to speak before the Commission must sign-up on a designated form located at the entrance to the Council Chamber.
- 2. If the speaker wishes to discuss a specific item on the agenda of the Commission, it should be noted on the sign-up form.
- If the speaker wishes to discuss any subject not otherwise on the agenda of the Commission, time will be allowed after all agenda items have been completed and "public comments" are taken.
- 4. The applicant is given first opportunity to speak and is allowed two minutes for an opening presentation. The applicant is also allowed a rebuttal after all speakers have been heard; two additional minutes will be allowed.
- Speakers will be allowed two minutes for specially called hearing items, replats with notice, variances, and special exceptions.
- 6. Speakers will be allowed 1 minute for all consent agenda items.
- 7. Time limits will not apply to elected officials.
- 8. No speaker is permitted to accumulate speaking time from another person.
- Time devoted to answering any questions from the Commission is not charged against allotted speaking time.
- The Commission reserves the right to limit speakers if it is the Commission's judgment

- that an issue has been sufficiently discussed and additional speakers are repetitive.
- 11. The Commission reserves the right to stop speakers who are unruly or abusive.

Limitations on the Authority of the Planning Commission

By law, the Commission is required to approve subdivision and development plats that meet the requirements of Chapter 42 of the Code of Ordinances of the City of Houston. The Commission cannot exercise discretion nor can it set conditions when granting approvals that are not specifically authorized by law. If the Commission does not act upon a Sec. I agenda item within 30 days, the item is automatically approved. The Commission's authority on platting does not extend to land use. The Commission cannot disapprove a plat because it objects to the use of the property. All plats approved by the Commission are subject to compliance with applicable requirements, e.g., water, sewer, drainage, or other public agencies.

Contacting the Planning Commission

Should you have materials or information that you would like for the Planning Commission members to have pertaining to a particular item on their agenda, contact staff at 832-393-6600. Staff can either incorporate materials within the members Agenda packets, or can forward to the members messages and information.

Contacting the Planning Department

The Planning and Development Department is located at 611 Walker Street on the Sixth Floor. Code Enforcement is located at 1002 Washington Street.

The Departments mailing address is: P.O. Box 1562 Houston, Texas 77251-1562

The Departments website is: www.houstonplanning.com

E-mail us at: Planning and Development Suzy.Hartgrove@houstontx.gov

Speakers Sign In Form

Instructions:

- 1. So that the Commission's Chairperson can call on those wishing to address the Commission, please provide the information below. Make sure the information is legible. If you have questions about the form or a particular item while filling out this form Planning and Development Department staff members are available at the front of the room to answer any questions. Hand the completed form to a staff member prior to the meeting's Call to Order.
- 2. It is important to include your "position" so that the Chairperson can group the speakers by position.

Your Position Regarding the Item (supportive, opposed, undecided):

- 3. If you are a part of an organized group of speakers and want to address the Commission in a particular order please let a staff member know prior to the beginning of the meeting.
- 4. The Chairperson will call each speaker's name when it is his or her turn to speak. The Chairperson will also call out the speaker to follow.
- 5. As the called speaker you should move forward to the podium, state your name for the record, and then deliver your comments.
- 6. If you have materials to distribute to the Commission hand them to a staff member at the beginning of your presentation. Staff will distribute the information to Commission members on both sides of the table as you begin your comments.

VARIANCE Request Information Form

Application Number: 2016-0072
Plat Name: Aldine Fire Station GP
Applicant: Gessner Engineering
Date Submitted: 01/11/2016

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

Not to create an intersection within the required 2,600 ft of a thoroughfare.

Chapter 42 Section: 127

Chapter 42 Reference:

(a) A major thoroughfare shall intersect with a public local street, a collector street or another major thoroughfare at least every 2,600 feet. (b) Intersections along a major thoroughfare shall be spaced a minimum of 600 feet apart. (c) An intersection with a major thoroughfare shall not be within 400 feet of the intersection of two major thoroughfares.

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

Harris County Emergency Service currently owns tracts of land located between F.M. 1960 and Humble-Westfield Road. The properties contain 5.591 Acres and 8.408 Acres. Harris County Emergency Service is the process of the developing said 5.591 Acres tract into a new Fire Station to benefit the surrounding community with plan to eventually develop the 8.408 into a fire training facility. The property is bounded by a cemetery and a privately owned access road. Any creation of the an intersection would have to pass between the soon to be constructed fire station and future fire training facility and tie into the above said private cemetery access road.

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The cut through traffic would create unnecessary risk to the public which may result in possible injury and damage to personal property which is specifically stated as a condition in Sec. 42-81 (4)

(3) The intent and general purposes of this chapter will be preserved and maintained;

The required in section 42-127 may be applied to an adjoining undeveloped property located the east of Harris County Emergency Service 5.591 Acre tract and provide a more direct access into Humble-Westfield Road.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

By not granting this variance, it would be considered a risk to public. The specific uses of the facility have not been yet determined and could involve certain training measures involved that may affect the public in a negative way.

(5) Economic hardship is not the sole justification of the variance.

Justification of the hardships fall on the betterment of the community, safety of pedestrians, drivers, and bicyclists, and the proper application of tax dollars being the property is owned by a county organization.

VARIANCE Request Information Form

Application Number: 2015-2466

Plat Name: Harlien Acres

Applicant: Hutchison & Associates, Inc.

Date Submitted: 12/04/2015

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

Not to require an east/west street along a Major Thoroughfare every 2600', to allow 2 lots to take access from an access easement and not have street frontage and not to require widening along the Major Thoroughfare Miller Wilson Road.

Chapter 42 Section: 127 & 185

Chapter 42 Reference:

A major thoroughfare shall intersect with a public local street, a collector street or another major thoroughfare at least every 2600' and the minimum width of any lot along a street or shared driveway shall be 20'

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

Giving up 60-80 feet additional right-of-way for a public roadway would deprive the applicant reasonable use of the land, inasmuch as, applicant owns most of acreage around the property and uses it now for agriculture; giving up an additional 20 feet of right-of-way for widening of Miller-Wilson Road would not be feasible unless said Road actually were to get widened as part of the major thoroughfare plan. Owners would consider dedication at that time.

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

This would be impractical, inasmuch as, the property is not likely to be developed to the extent that a County Road would be necessary and other property owners adjacent and in close proximity are not likely to be developing further and therefore would not be required to give additional right-of-way for an East/West public road at a future date; this would not be reasonable for current owners to be the only ones along Miller-Wilson to dedicate an additional 20 feet of right-of-way. This would, in my opinion, be unfair to the Harliens, inasmuch as, if the widening of Miller-Wilson was ever actually done the adjacent property owners would be compensated for their land and the Harliens would not be if they were required to donate the land at this time. Miller-Wilson Road may never be widened and giving up the right-of-way at this time would not be a reasonable request.

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The applicant did not create this hardship; it was created by County regulations which are not feasible for this area at this time for dedication of additional right-of-way for an East/West public road nor for widening of Miller-Wilson Road.

(3) The intent and general purposes of this chapter will be preserved and maintained;

The applicant does not seek to change the intent or general purpose of this chapter—just requests the right to continue maintaining and working their land as they currently do and to be fairly compensated for right-of-way if and when it becomes necessary and feasible to dedicate additional right-of-way for either a public East/West road or for widening of Miller-Wilson Road.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

Inasmuch as the public health, safety and/or welfare are not being injured now as a result of the use of the land in its present state and will not be affected by the development of these 4 lots; applicant does not see that granting this variance will have much impact at all.

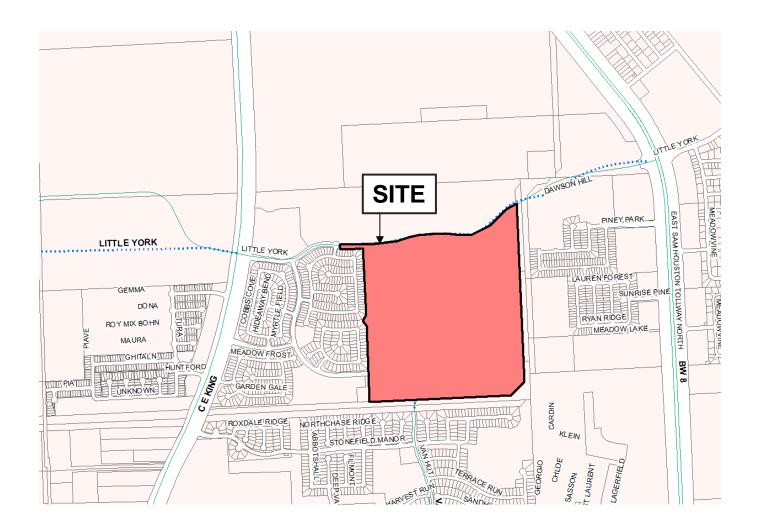

(5) Economic hardship is not the sole justification of the variance.

Economic hardship is not the sole justification for the variance—applicant has purchased acreage in hopes of enjoying a peaceful, relatively quiet way of life they desire—not for purposes of developing a large subdivision with excessive traffic. However, it would be unfair to require one owner to dedicate a large portion of their land for a project that may never happen and in the future the other land owners would more than likely be compensated for any land required to be dedicated by them.

VARIANCE Request Information Form

Application Number: 2016-0055

Plat Name: Hidden Meadow East GP

Applicant: McKim & Creed, Inc.

Date Submitted: 01/11/2016

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

To allow an intersection spacing exceeding 1,400' feet along the eastern plat boundary.

Chapter 42 Section: 128

Chapter 42 Reference:

Each local street shall intersect with a street that meets the requirements of subsection (b) at least every 1,400 feet;

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR N/A

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

The Harris County Flood Control ditch (HCCF L104223) bounds this property to the east, along with an existing subdivision Sunrise Pines east of the ditch. With the Sunrise Pines built out, it unlikely that a street would ever be extended through the existing lots. Therefore, the provision of a street "stub" would be impractical and contrary to sound public policy.

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The circumstances supporting the granting of the variance are based on the existing physical characteristics that affect this property.

(3) The intent and general purposes of this chapter will be preserved and maintained;

The intent of the chapter is to provide reasonable connections to adjacent properties in order to ensure adequate traffic circulation within the general area. Any additional streets extending from the subject site across the Harris county flood control ditch would then also have to tie into an the existing subdivision Sunrise Pines, which is already built out without any stub street to tie into. The proposed street pattern within the revised general plan is consistent with the intent and general purposes of the Chapter.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

In addition to providing adequate circulation, the proposed street pattern will allow for sufficient ingress/egress for residents as well as police, fire, and emergency vehicles and will not pose any threat to the public health, safety, or general welfare.

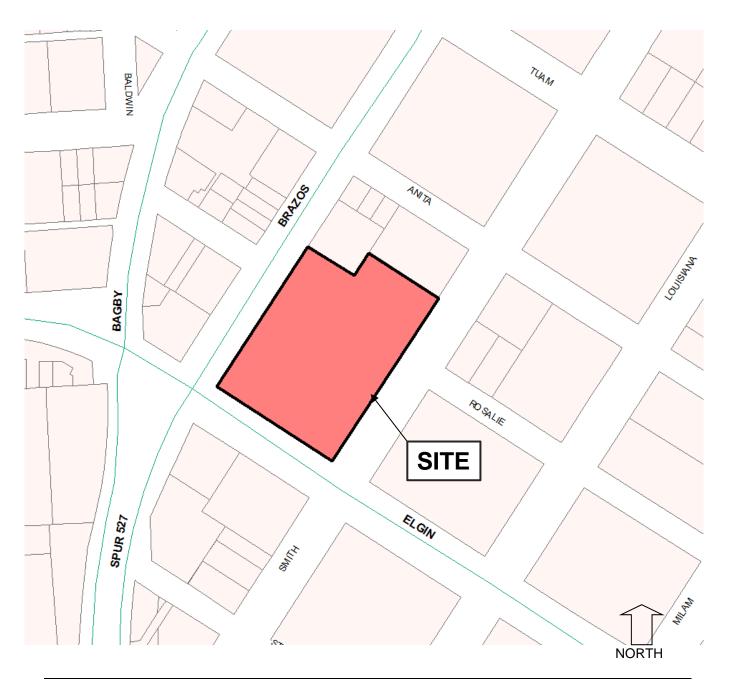

(5) Economic hardship is not the sole justification of the variance.

The circumstances supporting the granting of the variance are based on the existing unique physical characteristics that affect the property in question. ©

Applicant: Vernon G. Henry & Associates, Inc.

Date Submitted: 01/08/2016

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

Reduced building setback on Smith, and Brazos Streets to 0' and on Elgin to 2'; not to create visibility triangles on Elgin

at Brazos

Chapter 42 Section: 150, 161

Chapter 42 Reference:

Sec. 42-152. Building line requirement along major thoroughfares. (a) The portion of a lot or tract that is adjacent to a major thoroughfare shall have a building line requirement of 25 feet unless otherwise authorized by this chapter. 42-155: The building line requirement for a tract used or to be used for other than single-family residential purposes adjacent to a street that is a collector street or local street that is not an alley shall be ten feet unless otherwise required or authorized by this chapter. Sec. 42-161. Visibility triangles. The building line for property adjacent to two intersecting streets shall not encroach into any visibility triangle, the triangular area adjacent to the intersection of any street established by measuring a distance of 15 feet from the point of intersection of two streets along the right-of-way of each of the intersecting streets and connecting the ends of each measured distance, to assure adequate visibility sight lines for vehicular traffic approaching the intersection. The maximum height of the visibility triangle shall be 20 feet as measured vertically from the ground.

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

This property is to be developed for a grocery store at the ground level with apartments on four floors above. Garage parking for shoppers will be below the grocery store; parking for the residents will be in the garage floors between the store and the apartment floors. The service area/loading docks for the store will be within the building on the ground level. The property is within the Midtown TIRZ, which supports this project. The project plan for Midtown, as approved by City Council, called for new buildings to be constructed close to the street in order to create the kind of dense urban environment often found in sections of older cities in this country and abroad. Mixed use was also sought so that residents might be able to walk or take transit to restaurants, shops, museums, and places of employment rather than being totally car-dependent. Most of the development to date has been mixed horizontally rather than vertically, ad proposed in this project. Constructing the buildings close to the street is seen to be a major factor in creating a pedestrian-friendly streetscape - one which makes pedestrians feel safe and welcome and which is interesting and pleasant to walk along. When urban buildings are setback from the sidewalk, the area between the sidewalk and the street usually gets fenced and becomes an "np-man's land", keeping pedestrians out and building occupants in. This is usually felt to be an un-friendly environment which discourages walking and encourages everyone to drive from one location to the next. If the Commission grants the requested variance, this project will have a pedestrian zone on all three sides with enhanced paving materials, wider sidewalks, and larger street trees. Windows on two sides will give the pedestrians views into the grocery store and the entry/public area of the apartments. The pedestrian area along Smith will be 14'11 2/3" (the building will be 7"from the property line at the ground floor); along Elgin it will be 19'8" from the curb (3'10" from the property line on upper floors and 5'8" from the property line on the ground floor); and along Brazos it will be 15'8" (1 1/2"" from the property line). All streets will have enhanced paving to further make things more interesting for pedestrians. A mural is proposed on the Smith Street wall and a special material pattern on the Brazos ground floor facade. Windows will line the Elgin ground level. New street trees will be planted where they are current

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The adopted plan for Midtown calls for the creation of pedestrian-friendly streetscapes, which require variances from the city-wide usual standards as well as extra and enhanced items within the pedestrian realm. A key part of the desired environment is having the buildings constructed close to the street.

(3) The intent and general purposes of this chapter will be preserved and maintained;

One of the purposes of Chapter 42 is to support unique neighborhood character, which can be done by requesting variances from the standard requirements. The visibility triangles at intersections are intended to allow divers to see vehicles approaching at right angles to them. There are a very few one-way streets within the City and no special provisions were made for them even when the opposing traffic is on the opposite side of the street allowing for adequate visibility.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

A reduced building setback promotes an urban environment that is friendly to pedestrians.

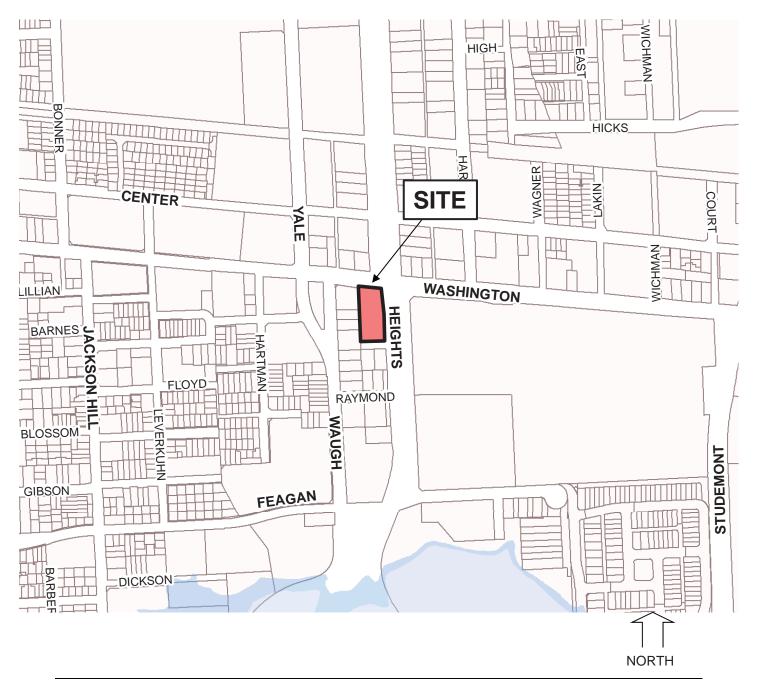

(5) Economic hardship is not the sole justification of the variance.

The justification for the variance is the creation of a pedestrian-friendly environment in accordance with the plan for Midtown.

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

To allow a dual building line along Washington Avenue. We are requesting a variance to allow a removable sail shade patio cover be constructed along Washington Avenue with a minimum 2.2' building line. The requested building line would only be for the life of the sail shade patio cover. Any other structure will adhere to the required 25' building line.

Chapter 42 Section: 42-152

Chapter 42 Reference:

Sec. 42-152. Building line requirement along major thoroughfares. (a) The portion of a lot or tract that is adjacent to a major thoroughfare shall have a building line requirement of 25 feet unless otherwise authorized by this chapter.

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

This tract of land is located at the southwest corner of the intersection of Washington Avenue with Heights Boulevard, both classified as major thoroughfares. This property is located along the Washington Corridor, which has long been established as an entertainment and night life destination for the City of Houston. The current business located on this site is J. Black's, which is a restaurant and bar servicing the Washington Corridor for the last 3-4 years. The proposed site plan would erect six removable canvas sail shades, creating a covered patio area for moveable picnic tables. The closest corner of the proposed sail shade structure would be approximately 2.2' from the existing right-of-way line of Washington Avenue. The Washington Corridor is largely comprised of restaurants and bars, both on Washington Avenue and Heights Boulevard. Many of these establishments have been developed on a zero building line, with permanent improvements for a patio area. A good example of such an establishment is the Porch Swing Pub, located just north of Washington Avenue on Heights Boulevard. The Washington Corridor is an extremely active pedestrian realm with many people moving from establishment to establishment. This project will greatly enhance the pedestrian realm by providing enhanced landscaping along Washington Avenue, along a 42" wrought iron fence at the edge of the sail shade structure, to provide both safety and connectivity to the pedestrian realm. This proposed addition will also add approximately 40 bicycle parking spaces. The proposed structure will be comprised of 4" diameter metal poles anchored in concrete, with removable canvas sail shades for a roof. There will be no walls or sides to the proposed structure, as well, there will be no electricity permitted with this structure. This project will truly be removable. The site will take all vehicular access from Heights Boulevard and Barnes Street, thus limiting any potential vehicular exposer to the pedestrian realm and increasing the potential safety of the pedestrians. Pedestrian access to the new covered area will be taken down a new private sidewalk to the front door of the restaurant, this will provide greater security to both the pedestrians and restaurant staff.

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The pattern of development has been long established many years prior to this developer owning the site. This variance request is based on the development pattern surrounding this site and the desire to be consistent with the nearby developments, as wells as to improve the pedestrian realm to create a pleasing development.

(3) The intent and general purposes of this chapter will be preserved and maintained;

The intent and purposes of Chapter 42 include the establishment of building setbacks appropriate to an area and situation, recognizing the differences in design framework of various areas, encouraging the efficiency of land development patterns. The dual building line proposed for this property is consistent with all of these purposes. The proposed sail shade structure will be constructed with no walls as well as, away from the street intersection, thus not hampering any visibility along Washington Avenue.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

The variance will not be injurious to public health, safety or welfare. The vehicular access to the existing business will be from a private driveway, accessing from Heights Boulevard and Barnes Street. This will promote safe pedestrian use of the sidewalks along Washington Avenue, by eliminating any potential vehicular access. The proposed development will also make improvements to the pedestrian realm, creating a safer environment.

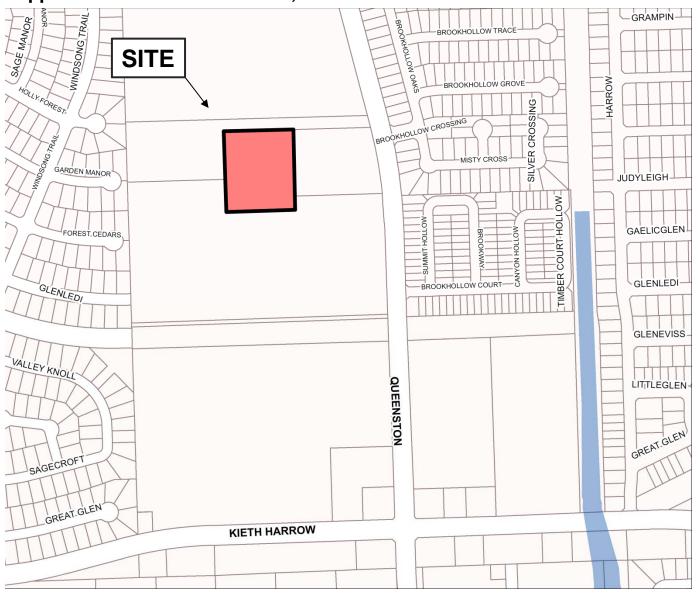

(5) Economic hardship is not the sole justification of the variance.

The justification of this variance is to obtain approval through the planning commission of a desirable commercial project consistent with the character and circumstances of its surroundings. The existing conditions and structures surrounding the property are the justification of the variance.

Date Submitted: 01/11/2016

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

Requesting for a variance from direct access to a street and a variance from providing 20-Ft of lot frontage along Queenston Boulevard. Allow legal access off of an existing Recorded Access Easement.

Chapter 42 Section: 47 & 81

Chapter 42 Reference:

42-180a (3) (Ensure that direct vehicular access is provided from a street, shared driveway, or alley). 42-185 (a)The minimum width of any lot along a street or shared driveway shall be 20 feet.

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

Requiring that the proposed single family lot have 20 feet of frontage along Queenston Boulevard is impossible at this time, because the property is currently land-locked. The access driveway immediately north of the proposed lot is owned by Barker Cypress Municipal Utility District (MUD) that needs the driveway for its own access to and from its Lift Station Facility. Requiring a street or 20-Ft of frontage would not allow the property to be developed at all.

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

The proposed plat of Tran Residence is a replat of Dronet Queenston Reserve. This replat is a 3.273-acre tract being developed in the Houston ETJ, west of State Highway 6 and north of Keith Harrow Boulevard. The reason for the replat is to change a platted reserve to a single-family residence. The proposed lot is land-locked and has no legal access to a public street. The property is surrounded by Tipps Elementary School to the south, Christian Family Church to the east (blocking the access to Queenston Boulevard) and the Barker Cypress MUD to the west and north. The 60-Ft Access Easement to the north was dedicated by Barker Cypress MUD in March 2003 in order to provide ingress and egress privileges to Queenston Boulevard for this tract as well as their Lift Station Facilities.

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

Dronet Queenston Reserve was approved on March 20, 2014 with a variance to allow a reserve restricted to storage and related uses to take access from a 60-Ft Access Easement. This Access Easement was granted by Barker Cypress MUD in 2003 by a document recorded in H.C.C.F. No W536136. The Access Easement was granted to provide vehicular access needed for development of this tract. In 2014 planning commission granted a variance to allow access to a reserve restricted to storage facility. The property was not developed, then sold to another individual. The new owner, Mr. Tinh Gong Tran who has recently purchased this property is planning to build a residence and use it as a single-family lot. Harris County will not issue residential permits on a commercial reserve. The existing condition of the property supports the variance and is not a hardship imposed by the applicant.

(3) The intent and general purposes of this chapter will be preserved and maintained;

On March 20, 2014 a variance was granted to allow a reserve restricted to storage and related uses to take access from a 60-Ft easement. Chapter 42-180a(3) states that direct vehicular access is provided from a street or shared driveway. The 60-Ft Access Easement that was granted by Barker Cypress MUD is a recorded agreement that is legal and the roadway serves as a shared driveway for this tract and for the lift station facility that accesses off of Queenston Boulevard. The shared access agreement supports that the intent and general purposes of this chapter will be preserved and maintained.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

The proposed plat will not be injurious to the public health and safety of the area. The Houston Planning Commission granted the variance to allow a reserve restricted to storage access from a 60-Ft easement in 2014. A single-family residence would not create a public safety issue and is a low-impact use for 3.273 acres tract. The 60-Ft Access Easement is currently being used by Barker Cypress MUD facility that is situated directly to the west of this property.

(5) Economic hardship is not the sole justification of the variance.

Economic hardship is not the justification for the variance. The proposed plat is a 3.273-acre tract that can not be developed as a single family lot without a variance to allow the existing 60-Ft Access Easement as access. The existing condition of a "land-lock" property is the reason that this variance should be granted. The existing condition of no-access is probably the reason why the Planning Commission originally granted the variance to allow the 60-Ft Access Easement to be used for the Dronet Queenston Reserve Subdivision. This variance request is an extension of the original request.

VARIANCE Request Information Form

Application Number: 2015-2600
Plat Name: Wabash North Shepherd

Applicant: Karen Rose Engineering and Surveying

Date Submitted: 12/20/2015

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

The variance being requested is to allow for a dual building line for a new porch to be added to an existing building which will encroach 7.9 feet into the 25-foot building setback for 65.1 feet along North Shepherd Drive.

Chapter 42 Section: 42-152

Chapter 42 Reference:

Sec. 42-152. Building line requirement along major thoroughfares. (a) The portion of a lot or tract that is adjacent to a major thoroughfare shall have a building line requirement of 25 feet unless otherwise authorized by this chapter.

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

This project is the refurbishment and embellishment of an existing building which has an existing overhang that currently encroaches 3 feet into the 25-foot building setback. The building was constructed in 1957, prior to current building line requirements for major thoroughfares. The Wabash Feed and Garden Store intends to move to this site from their current location on Washington Avenue and recreate the same kind of welcoming "country front porch" space here as they have at the Washington Avenue location. Currently the area between the front of the building and the back of the curb in North Shepherd Drive is entirely paved and has served as the parking lot and entrance for the building. As can be seen on the Site Plan this paving will be removed leaving a 6-foot wide sidewalk in North Shepherd Drive and a 3 foot strip for landscaping. The focus of the entrance will be moved to the south side of the porch where the customer parking will be located. This will eliminate one curb cut along North Shepherd Drive and some of the congestion and confusion at the intersection of North Shepherd and Heidrich Avenue. The remaining curb cut into the customer parking area will be one-way into the lot only with the appropriate striping and signage. The approval of the City of Houston traffic department for the proposed layout of the parking lot is attached.

- (1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;
- (2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The existing building which Wabash Feed and Garden Store wishes to refurbish and embellish was constructed prior to the City of Houston establishing building line requirements for major thoroughfares. The variance will only be for the life of the existing structure with the attached porch.

(3) The intent and general purposes of this chapter will be preserved and maintained;

The intent of Chapter 42 to promote the general welfare and orderly development of the City of Houston will be maintained. A safer and more pleasant pedestrian area will be created across the frontage of the site adjacent to the existing building.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

Public safety will be improved by the modifications to the existing parking lot by eliminating an extra curb cut in the intersection with Heidrich Avenue and by eliminating the sharing of the pedestrian sidewalk for North Shepherd Drive with the original parking area at the original entrance to the building. Pedestrians along North Shepherd Drive will now

be completely separated from the areas of vehicular movement on site.

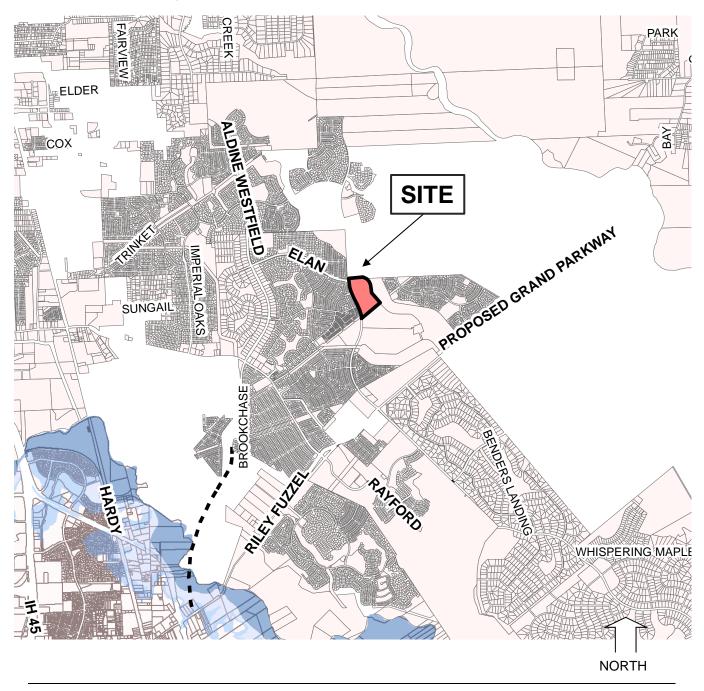

(5) Economic hardship is not the sole justification of the variance.

The granting of this variance will allow Wabash Feed and Garden Store to build a front porch structure on this building and re-orient the pedestrian and vehicular movement at this site which will also allow for a safer and more pleasant pedestrian experience along North Shepherd Drive. Without the granting of the variance the porch could not be constructed.

SPECIAL EXCEPTION Request Information Form

Application Number: 2016-0021

Plat Name: Wrights Landing at Legends Trace Sec 3

Applicant: BGE|Kerry R. Gilbert Associates

Date Submitted: 01/08/2016

(Sec. 42-48 and Sec. 42-82)

Specific requirement for which the special exception is being sought:

To allow 173 lots to have only one point of access, which is a boulevard entry street connecting to a major thoroughfare.

Chapter 42 Section: 189

Chapter 42 Reference:

Sec 42-189. Points of access. Any subdivision that includes more than 150 lots shall have at least two points of access separated from each other by a distance of at least 250 feet to a public street outside the boundaries of the subdivision.

Statement of Facts

(1) Special circumstances exist that are unique to the land or the proposed subdivision or development and that are not generally applicable to all other land, subdivision for development in the city or its extraterritorial jurisdiction that justify modification of the standards that would otherwise apply;

Wrights Landing is a ±35-acre single-family community located in Montgomery County, east of the Hardy Toll Road and about one mile north of the future Grand Parkway, on the major thoroughfare Birnham Woods Drive, which forms the western boundary of the development. The site is bounded on the east by Woodsons Gully and the limits of the City of Houston ETJ. The surrounding tracts are all developed or in the process of being developed as single-family residential communities. The subject site proposes 173 lots off of one point of access, which is a 15% deviation from the standard. These lots access the major thoroughfare Birnham Woods Drive via a boulevard entry street that serves the community, providing separate lanes for ingress and egress to accommodate peak traffic volumes and emergency situations. The internal street pattern is looped to allow for better circulation within the community as well.

(2) The proposed special exception will achieve a result contemplated by the standard in article III of Chapter 42 (Planning Standards);

The special exception will allow for a 15% deviation from the standard, with a design that accommodates safe and efficient traffic movement, which is a result contemplated by the standards of this Chapter.

- (3) The modification of the standard requested is not disproportionate to the requirement of the standard; The modification is a 15% deviation from the standard.
- (4) The intent and general purposes of this chapter will be preserved and maintained;

The proposed street layout and the configuration of the entry street onto the major thoroughfare will preserve and maintain the intent and general purposes of this chapter.

(5) The granting of the special exception will not be injurious to the public health, safety or welfare.

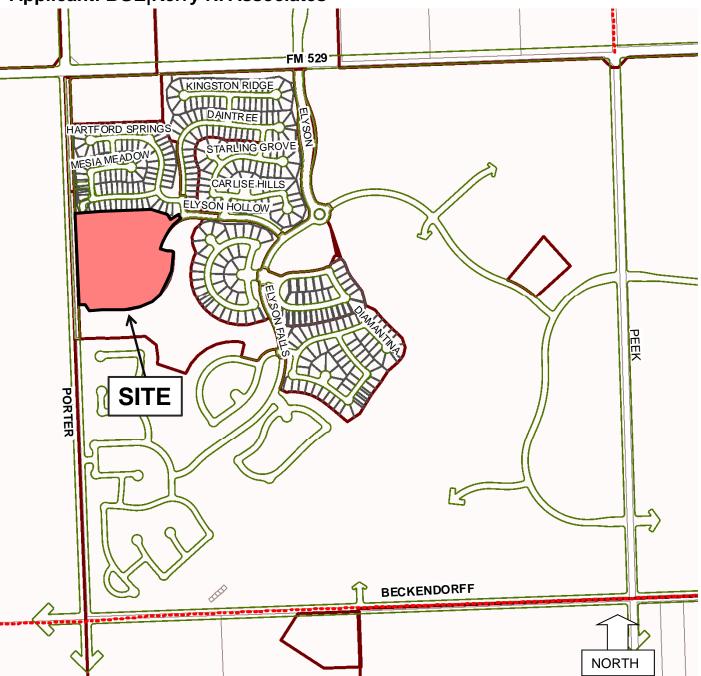

The design of the street network is designed to provide safe and efficient traffic movement, and is not injurious to the public health, safety, or welfare.

Technical Memorandum

To:

City of Houston & Harris County

From:

Isaac F. Joskowicz, PhD, PE, PTOE

Date:

October 5, 2015

Subject:

Elyson Section 8 - Pedestrian/Bicycle Connection

BROWN & GAY ENGINEERS, INC. TBPE FIRM REGISTRATION NO. 1046

The purpose of this technical memorandum is to analyze the internal traffic circulation needs on the west side of the Elyson development south of FM 529. There is currently no planned connection between section 8 and section 9 of the proposed development for internal traffic. To gain access between section 8 and section 9, traffic would be required to use the major thoroughfare (Porter Road) or the collector street located approximately 1,900 feet east of Porter Road. Due to the City of Houston requirements, an additional through street would need to be located between Porter Road and the planned collector street. However, the spacing would be close between Porter Road and the additional through street. As a result, an analysis was conducted to evaluate the feasibility of a pedestrian/bicycle crossing to provide internal access between section 8 and section 9 in lieu of a street.

Study Area

Elyson is a residential development located in Harris County, Texas. The study area consists of sections 5, 8, 9, 11, and 13, all single family homes. These sections are served by FM 529 to the north, Beckendorf Road to the south, Porter Road to the west, and Peek Road to the east. FM 529 runs east-west through the development and serves as a major thoroughfare, connecting with the Grand Parkway to the east. Three minor access streets, Access Streets A, B, and C, will connect the residential subdivisions with Porter Road. The five sections will total 330 residential lots upon completion. A schematic development plan of the residential subdivision including the proposed pedestrian/bicycle crossing is shown in **Appendix A**.

Circulation

Vehicle traffic from section 8 and section 9 is assumed to have the following distribution:

- 10% to Porter Road from Section 5 (Access Street A)
- 5% to Porter Road from Section 9 (Access Street B)
- 10% to Porter Road from Section 11 (Access Street C)
- 70% to FM 529 from internal collector street
- 5% to Peek Road from internal collector street

The development plan for Elyson Section 8 includes an internal collector street located approximately 1,900 feet east of Porter Road, running parallel with Porter Road. This does not meet the City of Houston's requirement of 1,400 feet between through streets, which would require additional access between the two roadways.

Under the current planned roadway network, not including an additional through street, there could potentially be three internal traffic issues, as follows:

- 1. Avoid major intersection (FM 529 at Porter Road)
- 2. Cut-through traffic
- 3. Non-familiar visitor traffic

Due to the lack of internal access, Porter Road could serve as an internal roadway and carry internal traffic for the west side of the Elyson development. The lack of the internal connection could be expected to increase traffic on Porter Road, which could increase traffic at the intersection of FM 529 at Porter Road. As a result, the additional traffic may encourage cut-through traffic from Access Street B to Access Street A to avoid the intersection of FM 529 at Porter Road and travel east through the proposed development. In addition to the cut-through traffic, non-familiar visitor traffic could be expected to use Porter Road to travel between sections on the west side of the development. However, it is expected that these impacts would be minimal. In particular, it is expected that visitors would impact during off-peak periods. An alternative to an internal through street to meet the requirement would be a pedestrian/bicycle crossing.

In order to provide internal circulation between section 8 and section 9, and prevent internal traffic from using Porter Road, a pedestrian/bike crossing can allow access between sections 8 and 9. This pedestrian crossing would cross over a drainage basin, and ultimately satisfy the need to provide an internal connector between the two residential sections.

Pedestrian Demand Origin/Destination

The pedestrian trip estimation was based on the weekday PM peak vehicles per hour (VPH) since the highest number of pedestrian are reported during the PM peak period. The estimation of pedestrian trips, including cycling trips, is shown in **Table 1**. This table is based on the *Estimating Future Bicycle and Pedestrian Trips from a Travel Demand Forecasting Model* (ITE Boston 1997), which estimates pedestrian/bike trips and vehicular trips as follows:

• 5% of vehicles per hour in the vicinity area

The vicinity area consists of the area within the ¼ mile radius of the proposed pedestrian crossing. The vicinity area was divided into two areas. The first area (North Developments – sections 5 and 8), includes Access Street A, which serves 157 residential lots to the north of the proposed pedestrian crossing. The second area (South Developments – sections 9, 11, and 13), include Access Street B and Access Street C, which serve 173 residential lots south of the proposed pedestrian crossing. Currently, there is a hike/bike trail system that connects the east, west and south residential development. However, there is no connection between the north and south residential developments.

The vehicle trip generation was estimated based on the Institute of Transportation Engineers (ITE) Trip Generation Manual (9th Edition) for the PM peak hour of a typical weekday. **Appendix B** shows the estimated trip generation volumes for the two vicinity areas around the proposed pedestrian crossing. **Table 1** summarizes the vehicle demand per hour (VPH) and pedestrian/bike demand per hour (PPH) trips for the proposed pedestrian crossing. The vehicle demand per hour is the amount of vehicles that are expected to travel to/from the north and south residential developments.

BROWN & GAY ENGINEERS Page 2

Table 1: Vehicle and Pedestrian/Bike Demand

Vicinity area	Vehicle Demand Per Hour (VPH)	Pedestrian/Bike Demand Per Hour (PPH)	Total (Peds)
North Developments – Sections 5 and 8	5	10	10
South Developments – Sections 9, 11, and 13	7	14	14
Total Pedestr	24		

The total number of pedestrian/bike trips in the vicinity areas were used to warrant the proposed pedestrian crossing. The proposed pedestrian crossing will serve the immediate areas of homes generating pedestrian traffic as well as the hike/bike trail system. It is expected that the pedestrian/bike demand will be higher than the vehicle demand. Therefore, it is recommended that the pedestrian crossing be installed to achieve internal access between the two sections.

Conclusions

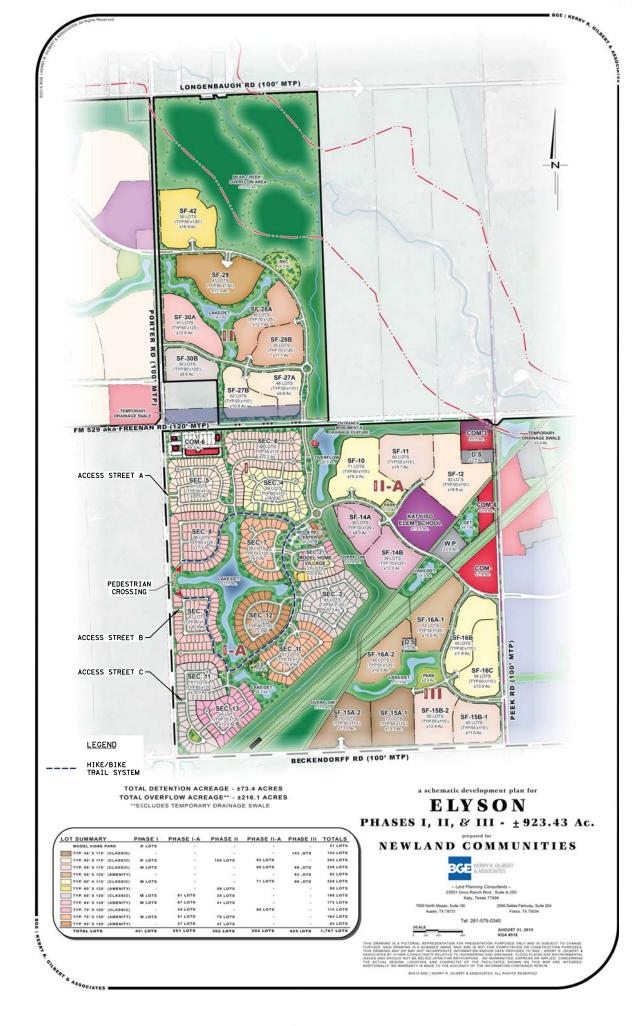

For the proposed development of Elyson Section 8, the distance between Porter Road and an internal collector street inside the development is approximately 1,900 feet, which exceeds the City of Houston's required distance of 1,400 feet. This would require an additional through street in-between the two roadways to reduce traffic using the development to avoid the major intersection of FM 529 at Porter Road, minimize cut-through traffic, and reduce the occasional non-familiar visitors to the development. However, since these impacts are expected to be minimal the additional through street should be replaced by a pedestrian/bicycle crossing.

The internal circulation between section 8 and section 9 can be achieved by constructing a pedestrian/bike crossing. The proposed pedestrian/bike crossing will provide access between the two residential sections, reduce the additional trips along Porter Road, as well as accommodate the pedestrian traffic expected between the two sections.

RECONSIDERATION OF REQUIREMENT Request Information Form

Application No: 2016-0063
Plat Name: Elyson Sec 8

Applicant: BGE|Kerry R. Gilbert Associates

Date Submitted: 01/11/2016

(Sec. 42-47 and Sec. 42-81)

Specific requirement or condition being sought:

To not provide the internal local street connection as previously required, and to therefore exceed the maximum internal / local street intersection spacing by allowing a distance of ±1970' between a major thoroughfare and an internal collector street.

Chapter 42 Section: 128

Chapter 42 Reference:

Sec. 42-128. Intersections of local streets. (a) Each class III plat and each general plan that shows local streets shall provide for internal circulation by meeting either of the following requirements: (1) Each local street shall intersect with a street that meets the requirements of subsection (b) at least every 1,400 feet; or, (2) One or more collector streets within the class III plat or general plan shall connect with another collector street or major thoroughfare at a minimum of two points.

If this request requires a variance or special exception, the applicant must comply with the Plat Submittal Requirements and provide a completed Variance Request Information Form or Special Exception Information Form.

STATEMENT OF FACTS:

See Variance Request, addressing markup to provide an internal street connection on previously approved plat.

VARIANCE Request Information Form

Application Number: 2016-0063

Plat Name: Elyson Sec 8

Applicant: BGE|Kerry R. Gilbert Associates

Date Submitted: 01/11/2016

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

To exceed the maximum internal / local street intersection spacing by allowing a distance of ±1970' between a major thoroughfare and an internal collector street.

Chapter 42 Section: 128

Chapter 42 Reference:

Sec. 42-128. Intersections of local streets. (a) Each class III plat and each general plan that shows local streets shall provide for internal circulation by meeting either of the following requirements: (1) Each local street shall intersect with a street that meets the requirements of subsection (b) at least every 1,400 feet; or, (2) One or more collector streets within the class III plat or general plan shall connect with another collector street or major thoroughfare at a minimum of two points.

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

Elyson is a ±3,619.4-acre master planned community located far west of central Houston and north of the City of Katy. The project is west of the Grand Parkway (TX-99) and is primarily located north and south of FM 529, aka Freeman Road, a major thoroughfare. The site includes several square miles in the 1-mile thoroughfare grid, comprised of east-towest thoroughfares Stockdick School Rd, Beckendorff Rd, FM 529, Longenbaugh Rd and Sharp Rd (aka West Rd), and north-to-south thoroughfares Peek Rd, Porter Rd, Katy-Hockley Rd, and Katy-Hockley Cut-Off Rd, along with the Grand Parkway. The development is encumbered by multiple pipelines, drill sites and well sites, a 220'-wide power line easement, and two creeks: Bear Creek and South Mayde Creek. The site is also inundated by the overflow storm water of Cypress Creek (located north of the subject site) during storm events. The overflow storm water of Cypress Creek creates a unique condition in this region that would ordinarily render the subject site undevelopable. The solution to this situation has been described in detail as a part of variances requested under the Elyson GP (2014-2601), relating to the fact that the overflow solution creates several instances where meeting the normal intersection spacing requirements would be highly impractical. One of these instances impacts Elyson Section 8, the subject plat, which is a part of Phase I of the overall development. Elyson Phase I includes the first 8 single-family sections south of FM 529 and east of Porter Rd, as well as the first phase of storm water facilities necessary to begin establishing the drainage solution that captures, detains, and redirects the overflow storm water that impacts the region. Section 8 is the southwestern-most residential section in Phase I, located along Porter Rd which forms the western plat boundary. To the south and east of Section 8 is one of the primary drainage / detention facilities of the overflow system. This lake / detention facility provides primary capacity for the ultimate configuration of the overflow system as it directs water to South Mayde Creek. To fulfill these purposes, the drainage / detention capacity requirements for the lake are extremely large. At its greatest extent, the lake spans approximately ±1970' east-to-west, as measured in a straight line between Porter Rd and the internal north-south collector street. This lake also connects to the temporary drainage facilities that run parallel to Porter Rd and catch the overflow water coming from the northwest. The temporary drainage swale directs the overflow water into the large lake facility south of Section 8, and is instrumental in removing the overflow storm water impact from the areas of Phase I. The overall design of Elyson includes several internal collector streets which feed traffic from the individual residential sections to and from the major thoroughfare network. One of these collector streets abuts the eastern edge of the detention lake south of Phase I. This collector street comes south from FM 529 but does not make a direct connection to Porter Rd; instead, the single-family sections adjacent to Porter Rd establish "back door" connections to the major thoroughfare, while primary traffic utilizes the collector street system. This design reflects several aspects of regional

traffic circulation that differ from the normal circumstances of a thoroughfare grid. First, the vast majority of east-west traffic in the region will be moving along FM 529, which is the nearest thoroughfare with ramp access to the Grand Parkway. Longenbaugh to the north and Beckendorff to the south both cross under the Grand Parkway in this area. Second. Porter Rd does not currently exist as a continuous north-south thoroughfare through the region, and is not likely to be extended in the near future, so the only traffic being carried by Porter Rd for some time will be "back door" traffic from Elyson itself. Per the attached Technical Memo studying the traffic projections of Elyson, the amount of traffic generated by these "back door" trips would be negligible - estimated at 5 trips per hour from Sections 5 and 8 combined. In the long term, on a regional thoroughfare grid supplemented by collector streets, these are miniscule impacts. In the short term, since Porter Rd does not yet connect to the rest of the thoroughfare network, this would be the sole traffic utilizing Porter Rd to the foreseeable future. Therefore, all the traffic from Elyson Phase I is designed to utilize the collector street network feeding back to FM 529, rendering an internal street connection across the lake unnecessary. In lieu of an internal street connection across the lake, Elyson Sec 8 proposes a pedestrian/bicycle trail connection to accommodate "house-to-house" trips between Elyson Phase I and the future sections to the south of the lake. This trail connection would encourage local "house-to-house" trips to occur on foot/bicycle instead of by car, therefore increasing pedestrian activity and promoting a healthier lifestyle for community residents, with the added benefit of reducing total vehicle trips on the vehicular street network. The proposed trail connection therefore eliminates the need for the internal local street to meet intersection offset requirements, while positively benefiting both traffic circulation and the health and welfare of the residents.

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The overflow storm water from Cypress Creek is a hardship that impacts the entire region. The proposed regional drainage swale system is required in order to handle the overflow water and make the project developable, and is therefore not a hardship created or imposed by the applicant. Furthermore, the existing and future thoroughfare system and the traffic patterns established by the Grand Parkway are all factors that are influenced by multiple entities, not solely under the control of the applicant.

(3) The intent and general purposes of this chapter will be preserved and maintained;

The pedestrian trail provides internal circulation for the projected number of internal trips, while also removing vehicular trips from the thoroughfare system, which preserves the overall circulation of the region and therefore will preserve and maintain the intent and general purposes of this chapter.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

The granting of the variance will be of direct benefit to the public health, safety, and welfare by encouraging pedestrian activity in lieu of vehicular trips on the major thoroughfare network.

(5) Economic hardship is not the sole justification of the variance.

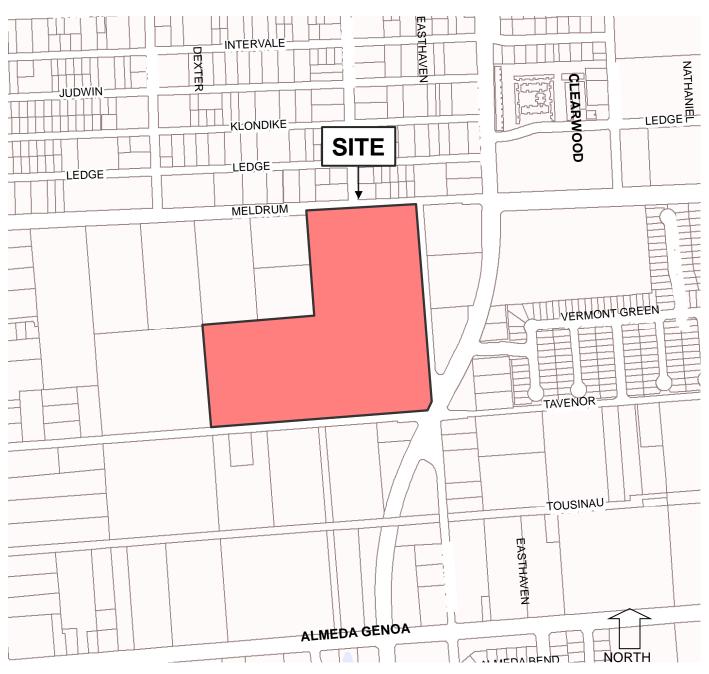

The overflow of Cypress Creek and the regional drainage swale system, as well as the projected traffic patterns for the region, are the supporting circumstances for this request.

VARIANCE Request Information Form

Application Number: 2016-0051

Plat Name: U Pull and Pay Houston

Applicant: Jones & Carter, Inc. - The Woodlands

Date Submitted: 01/11/2016

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

To exceed 1,400' intersection spacing by not providing a north-south public street through the site.

Chapter 42 Section: 128 a (1)

Chapter 42 Reference:

Each local street shall intersect with a street that meets the requirements of subsection (b) at least every 1,400 feet;

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

The proposed subdivision represents a replat of several unrestricted lots per 1910 South Houston Gardens No. 8 subdivision which established the block length of approximately 2,700' between Easthaven Boulevard and Radio Road. The purpose of the replat is to create a single tract for a future non-residential development. The block which encompasses the subject site features several large tracts under common ownership used for either residential or nonresidential/industrial use. The larger single family tracts (immediately west of the site) take access from the portion of Meldrum Road, east of Dexter Road. While categorized as singly family, these tracts seem to also have some nonresidential operations on site. The larger non-residential tracts utilize Tavenor Road for access to north-south major thoroughfares Airport Boulevard and Clearwood Drive. Smaller, single family developments also exist to the west along Radio Road. Requiring a north south public street through the proposed subdivision will not significantly improve traffic circulation and distribution in the area. Any required street through this site will be a 'street to nowhere' and will not connect to Meldrum Lane, until the adjacent tracts redevelop and provide for the extension of the street. The existing street grid established by the original 1910 South Houston Gardens No. 8 plat provides an adequate right-of-way network for addressing traffic concerns. Providing a 'street to nowhere' will not improve traffic circulation in the area. Further, potential negative impacts, especially on adjacent single family developments, include opportunities for illegal dumping and mixing of residential and non-residential traffic. The site will be taking access from Tavenor Lane and Easthaven Boulevard. There are existing non-residential developments in the same block that currently take access from Tavenor Lane. Future development of the site would not significantly increase traffic demands in the immediate area. As an alternative to providing a portion of a north-south street, improving traffic circulation in the area may be best addressed by paving several unimproved right-of-ways that were platted and recorded with the original 1910 South Houston Gardens No. 8 and 1929 Easthaven subdivisions. Currently, Meldrum Road is unimproved from Dexter Road to a point approximately 500' west of Radio Road. Should this portion of the street be constructed, street connectivity and functionality in the area would be maximized. Single family residents south of Meldrum Road can travel north to the adjacent Eastháven subdivision and vice versa.

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

The circumstances supporting the granting of this variance are based on the existing street network which provides a framework to adequately address traffic circulation and distribution. Any required street through this site will be a 'street to nowhere' and will not connect to Meldrum Lane, until the adjacent tracts redevelop and provide for the extension of the street. The adjacent singe family tracts are currently developed and are unlikely to redevelop in the future.

(3) The intent and general purposes of this chapter will be preserved and maintained;

The intent and purpose of 42-128 is to provide street connection to address traffic circulation and distribution. The street network in the overall area was created with the 1910 South Houston Gardens No. 8 and 1929 Easthaven subdivisions and provides a framework to adequately address traffic circulation and distribution.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

Public health, safety and welfare will not be adversely affected by this replat. The proposed development will take access from Easthaven Boulevard and Tavenor Road.

(5) Economic hardship is not the sole justification of the variance.

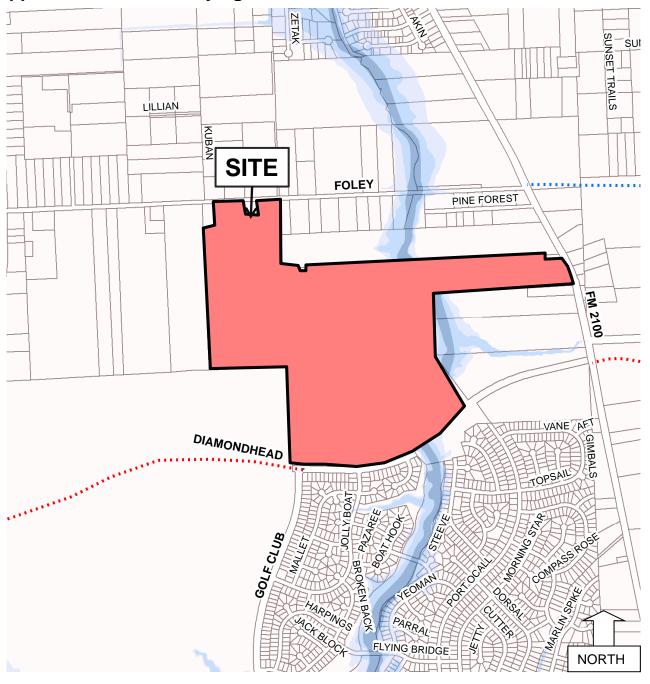

Economic hardship is not the justification of the variance. Any required north-south street through the site would dead end into the adjacent single family developed tracts. The existing street network provides a framework to adequately address traffic circulation and distribution.

RECONSIDERATION OF REQUIREMENT Request Information Form

Application No: 2015-2585

Plat Name: Union Park GP

Applicant: Action Surveying

Date Submitted: 12/18/2015

(Sec. 42-47 and Sec. 42-81)

Specific requirement or condition being sought:

A variance is being requested to not require a local street intersection or collector street every 1,400' along Golf Club Drive and North Diamondhead Boulevard.

Chapter 42 Section: 42-128(a)(1)

Chapter 42 Reference:

Each local street shall intersect with a street that meets the requirements of subsection (b) at least every 1,400 feet

If this request requires a variance or special exception, the applicant must comply with the Plat Submittal Requirements and provide a completed Variance Request Information Form or Special Exception Information Form.

STATEMENT OF FACTS:

The International Union of Operating Engineer's facility being proposed is a unique development where students from around the country will come to Harris County to learn how to operate heavy equipment. The project will provide a dormitory for the students to sleep, a cafeteria and class rooms for the students as well as locations where the students can run the new equipment in the field. The proposed usage of all land east of the proposed extension of Golf Club Drive will be for heavy equipment training. Any proposed east-west collector street from FM 2100 to the new Golf Club Drive would bisect the undeveloped areas where large equipment will be located and training exercises performed. There are safety concerns for the public for unauthorized vehicles traveling through site via a collector street during heavy equipment exercises. In addition, an existing natural drainage gully that runs north-south would require a significant bridge to be designed, engineered and constructed. The construction cost of such a bridge would put a financial strain on this project that would, effectively, bring the feasibility of this project into serious question. This unique project has the opportunity to encourage economic growth in the Crosby area and Harris County by providing local jobs to the community. Lastly, the residential development to the south does not have cross streets across the existing gully at 1,400' spacing as required in 42-128.a.1. The nearest bridge is found 1.92 miles to the south of North Diamondhead Boulevard.

VARIANCE Request Information Form

Application Number: 2015-2585
Plat Name: Union Park GP
Applicant: Action Surveying
Date Submitted: 12/18/2015

(Sec. 42-47 and Sec. 42-81)

Specific Variance is being sought and extent of variance:

The Variance requested is to not require a local street intersection every 1,400' along Golf Club Drive and North

Diamondhead Boulevard.

Chapter 42 Section: 128(a)(1)

Chapter 42 Reference:

Each local street shall intersect with a street that meets the requirements of subsection (b) at least every 1,400 feet; or

Statement of Facts

(1a) The imposition of the terms, rules, conditions, policies and standards of this chapter would create an undue hardship by depriving the applicant of the reasonable use of the land; OR

The requirement of having collector streets along Golf Club Drive would require the construction of a large bridge that would have to extend several hundred feet over the existing natural drainage feature Gum Gulley. Extensive design and construction of a bridge over said Gum Gulley, that runs north-south through our property, would be very costly and would bring the feasibility of this project into serious question. The open land on this property is used for training of large machinery and would be dramatically minimized by new roads bisecting the property.

(1b) Strict application would make this project infeasible due to the existence of unusual physical characteristics that affect the property in question, or would create an impractical development or one otherwise contrary to sound public policy;

N/A

(2) The circumstances supporting the granting of the variance are not the result of a hardship created or imposed by the applicant;

Gum Gulley is an existing major natural drainage channel that is a few hundred feet in width and must remain intact. This project is being designed with the understanding that the gulley will remain as a natural drainage feature for the area.

(3) The intent and general purposes of this chapter will be preserved and maintained;

The intent and general purposes of this particular chapter will be maintained if this variance is granted because without additional collector streets, undue stress (due to additional drainage) will not be put on Gum Gulley and thus the variance helps preserve the natural drainage pattern for the area that Gum Gulley provides.

(4) The granting of the variance will not be injurious to the public health, safety or welfare;

The Golf Club Drive extension will mostly serve the proposed facility in addition to provide access to Foley Road for the general public from North Diamondhead Boulevard. There would be no need for vehicles on Golf Club Drive to access FM 2100. If a cross-street were to be required, its existence may create hazardous conditions itself as there will be training with large machinery on both sides of any east-west collector street through the property. Therefore, removing the requirement for this street would eliminate the possibility of endangering the public and promote public safety or welfare.

(5) Economic hardship is not the sole justification of the variance.

The purpose of this facility is to train student operators on large equipment and heavy machinery. This site is attractive because of all the unused land in the project area. By requiring collector streets to cut through the site this would,

decrease the amount of usable training land, in addition to putting innocent bystanders in areas of heavy equipment training exercises run by student operators which could have a potential for public safety concerns.

City of Houston

Special Minimum Lot Size Area

Planning Commission Staff Report
Planning and Development Department

AGENDA: III

SMLSA Application No. 579: Abstract 80 Joel Wheaton Survey, Tracts 2N, 3B, and 3B-1; Briar Village Section 1, Blocks 6, 7, 5, 9, 10, 11, and 13; Briar Village Section 2, Block 11, Lot 74, Block 13, Lots 15-17, Block 20, Lot 1; Briar Village Section 4; Briarworth Section 1

BACKGROUND:

The Planning and Development Department received an application for the establishment of a Special Minimum Lot Size Area (SMLSA) for Briar Villages Sections 1 and 4 Subdivision. Analysis shows that a minimum lot size of 8,050 sq ft exists for the area. A petition was signed by the owners of 10% of the property within the proposed SMLSA. An application was filed and the Director has referred the application to the Planning Commission in accordance with the provisions of Chapter 42-204. This report provides the Commission with a synopsis of procedures and appropriate application criteria.

PROCEDURES:

Following acceptance of an initially complete application, the Planning Director notifies all owners of property within the proposed SMLSA. Any property owner who wishes to vote for or against the creation of the minimum lot size area may return the response form within thirty days. The Director shall forward a complete application to Planning Commission for public hearing and consideration upon finding that the application complies with all of the following:

- meets all criteria required for Planning Commission approval (listed in next paragraph);
- shows evidence of support from owners of at least 55% of the property within the proposed SMLSA

After close of a public hearing the Planning Commission shall consider the following:

- the boundaries of the proposed SMLSA shall contain no less than five block faces, composed of 5 lots or more on each blockface;
- at least 80% of the lots to be included within the proposed SMLSA, exclusive of land used for a park, library, place of religious assembly or a public or private elementary, middle, junior high or high school, is developed with or are restricted to not more than two singlefamily units per lot;
- the proposed SMLSA does not include a significant area developed as or restricted to a
 use that is not single family residential and;
- does not include a significant area that does not share a lot size character with the rest of the proposed area
- that the applicant has demonstrated sufficient support of 55% for the establishment of the proposed SMLSA;
- that the establishment of the SMLSA will further the goal of preserving the lot size character of the area; and
- that the proposed SMLSA has a lot size character that can be preserved by the
 establishment of a minimum lot size, taking into account the age of the neighborhood, the
 age of structures in the neighborhood, existing evidence of a common plan and scheme of
 development, and such other factors that the director, commission or city council,
 respectively as appropriate, may determine relevant to the area.

Should the Commission find that the application meets these requirements; the Commission must forward the application to City Council for consideration. City Council approval of the SMLSA is enforceable for forty (40) years from the effective date of the ordinance.

Planning and Development Department

STAFF ANALYSIS:

This application includes two hundred forty (240) properties in the Briar Village Sections 1 and 4 Subdivision

Analysis of the application resulted in the following findings:

- The boundaries of the proposed SMLSA must contain not less than five (5) blockfaces composed of five (5) lots or more on each blockface;
 - The application contains twenty-four (24) blockfaces with at least 5 lots on 5 blockfaces.
- At least 80% of the lots to be included within the proposed SMLSA, exclusive of land used for a park, library, place of religious assembly or a public or private elementary, middle, junior high or high school, must be developed with, or restricted to, not more than two single-family units per lot; For any lot or tract that was not vacant and was in use for other than single family residential purposes, the subdivision plat, development plat, or building permit may provide for any use permitted by law or, if applicable, deed restrictions. Land use of the properties consists of two hundred thirty-seven (237) single-family residential properties representing 99% of the total lots, two (2) vacant lots, and one (1) commercial lot.
- The applicant has demonstrated sufficient support for the SMLSA;
 The applicant obtained 60% support from property owners in the proposed SMLSA.
- Establishment of the SMLSA will further the goal of preserving the area lot size character; A minimum lot size of 8,050 sq ft exists on one hundred fifty-nine (159) of two hundred forty (240) lots in the area.
- The proposed SMLSA has a lot size character that can be preserved by the establishment of a special
 minimum lot size, taking into account the age of the neighborhood, the age and architectural features of
 structures in the neighborhood, existing evidence of a common plan or scheme of development, and such
 other factors that the director, commission or city council, respectively as appropriate, may determine relevant
 to the area.
 - The subdivisions were platted in 1970, 1971, 1974, and 1976. Most of the homes were constructed in the 1970s. The establishment of an 8,050 sq ft minimum lot size will preserve the lot size character of the area.
- The minimum lot size for this application was determined by finding the current lot size that represents a minimum standard for 70% of the application area.
 One hundred fifty-four (154) out of two hundred forty (240) lots representing 70% of the application area are at least 8,050 square feet in size.

Public notice of the public hearing was transmitted to all property owners in the area.

Special Minimum Lot Size Area

Planning Commission Staff Report
Planning and Development Department

AGENDA: IV

SMLSA Application No. IV: Briar Village Section 1, Block 14, Lots 1-7, Block 16, Lots 1-3, Block 18, Lots 1-10; Briar Village Section 2, Block 11, Lots 32-74, all of Block 12, Block 13, Lots 18-32, Block 14, Lots 8-20 and Lots 41-68, all of Block 15, Block 16, Lots 21-37, all of Block 17, Block 18, Lots 11-30, all of Block 19, Block 20, Lots 1-12 and all of Block 21; Briar Village Section 3, Block 14, Lots 21-40, Block 16, Lots 1-59

BACKGROUND:

The Planning and Development Department received an application for the establishment of a Special Minimum Lot Size Area (SMLSA) for Briar Village Section 1, 2 and 3 Subdivisions. Analysis shows that a minimum lot size of 7,495 sq. ft. exists for the area. A petition was signed by the owners of 10% of the property within the proposed SMLSA. An application was filed and the Director has referred the application to the Planning Commission in accordance with the provisions of Chapter 42-204. This report provides the Commission with a synopsis of procedures and appropriate application criteria.

PROCEDURES:

Following acceptance of an initially complete application, the Planning Director notifies all owners of property within the proposed SMLSA. Any property owner who wishes to vote for or against the creation of the minimum lot size area may return the response form within thirty days. The Director shall forward a complete application to Planning Commission for public hearing and consideration upon finding that the application complies with all of the following:

- meets all criteria required for Planning Commission approval (listed in next paragraph);
- shows evidence of support from owners of at least 55% of the property within the proposed SMLSA

After close of a public hearing the Planning Commission shall consider the following:

- the boundaries of the proposed SMLSA shall contain no less than five block faces, composed of 5 lots or more on each blockface;
- at least 80% of the lots to be included within the proposed SMLSA, exclusive of land used for a park, library, place of religious assembly or a public or private elementary, middle, junior high or high school, is developed with or are restricted to not more than two singlefamily units per lot;
- the proposed SMLSA does not include a significant area developed as or restricted to a
 use that is not single family residential and;
- does not include a significant area that does not share a lot size character with the rest of the proposed area
- that the applicant has demonstrated sufficient support of 55% for the establishment of the proposed SMLSA;
- that the establishment of the SMLSA will further the goal of preserving the lot size character of the area; and
- that the proposed SMLSA has a lot size character that can be preserved by the
 establishment of a minimum lot size, taking into account the age of the neighborhood, the
 age of structures in the neighborhood, existing evidence of a common plan and scheme of
 development, and such other factors that the director, commission or city council,
 respectively as appropriate, may determine relevant to the area.

Planning and Development Department

Should the Commission find that the application meets these requirements; the Commission must forward the application to City Council for consideration. City Council approval of the SMLSA is enforceable for forty (40) years from the effective date of the ordinance.

STAFF ANALYSIS:

This application includes three hundred forty-six (346) properties in Briar Village Section 1, 2 and 3 Subdivisions.

Analysis of the application resulted in the following findings:

- The boundaries of the proposed SMLSA must contain not less than five (5) blockfaces composed of five (5) lots or more on each blockface:
 - The application contains twenty-seven (27) blockfaces with at least 5 lots on 5 blockfaces
- At least 80% of the lots to be included within the proposed SMLSA, exclusive of land used for a park, library, place of religious assembly or a public or private elementary, middle, junior high or high school, must be developed with, or restricted to, not more than two single-family units per lot; For any lot or tract that was not vacant and was in use for other than single family residential purposes, the subdivision plat, development plat, or building permit may provide for any use permitted by law or, if applicable, deed restrictions.
 Land use of the properties consists of three hundred forty-four (344) single-family residential properties representing 99% of the total lots.
- The applicant has demonstrated sufficient support for the SMLSA;
 The applicant obtained 60% support from property owners in the proposed SMLSA
- Establishment of the SMLSA will further the goal of preserving the area lot size character; A minimum lot size of 7,495 sq. ft. exists on two hundred thirty (230) of three hundred forty-six (346) lots in the area.
- The proposed SMLSA has a lot size character that can be preserved by the establishment of a special minimum lot size, taking into account the age of the neighborhood, the age and architectural features of structures in the neighborhood, existing evidence of a common plan or scheme of development, and such other factors that the director, commission or city council, respectively as appropriate, may determine relevant to the area.
 - The subdivisions were platted in 1970, 1971 and 1973. Some of the houses were constructed in the 1970s. The establishment of a 7,495 sq. ft. minimum lot size will preserve the lot size character of the area.
- The minimum lot size for this application was determined by finding the current lot size that represents a minimum standard for 70% of the application area.
 - Two hundred thirty (230) out of three hundred forty-six (346) lots representing 70% of the application area is at least 7,495 square feet in size.

Public notice of the public hearing was transmitted to all property owners in the area.
